Astragals and Thresholds

DLP Industries New Stainable Aluminum Astragal

DLP Industries, Inc. is proud to introduce our new stainable aluminum astragal. Our new painting process was formulated specifically for DLP and allows for our product to be top-coated to match your doors using an oil-based stain, a latex paint, or an oil-based paint. As always, our aluminum astragals continue to maintain Florida Building Code Compliance.

Staining Instructions:

The door and Astragal should be stained as one

1. Wipe down the door and astragal with acetone to remove any contaminants or oil.
2. Allow acetone to dry, then tape off or remove the trim strips and hardware that's installed into the astragal in preparation for applying the stain.
3. Apply an oil-based interior wiping stain using a chip brush. Apply the stain in light coats, following the grain of your door. Once each coat becomes tacky, brush it using your chip brush to create the effect of wood grain. Let each coat dry thoroughly before applying the next, making sure to apply at least 2 coats.
4. Once your stain has fully cured, apply a SPAR Varnish for protection from the elements. Follow the manufacturers' suggestions for this application.

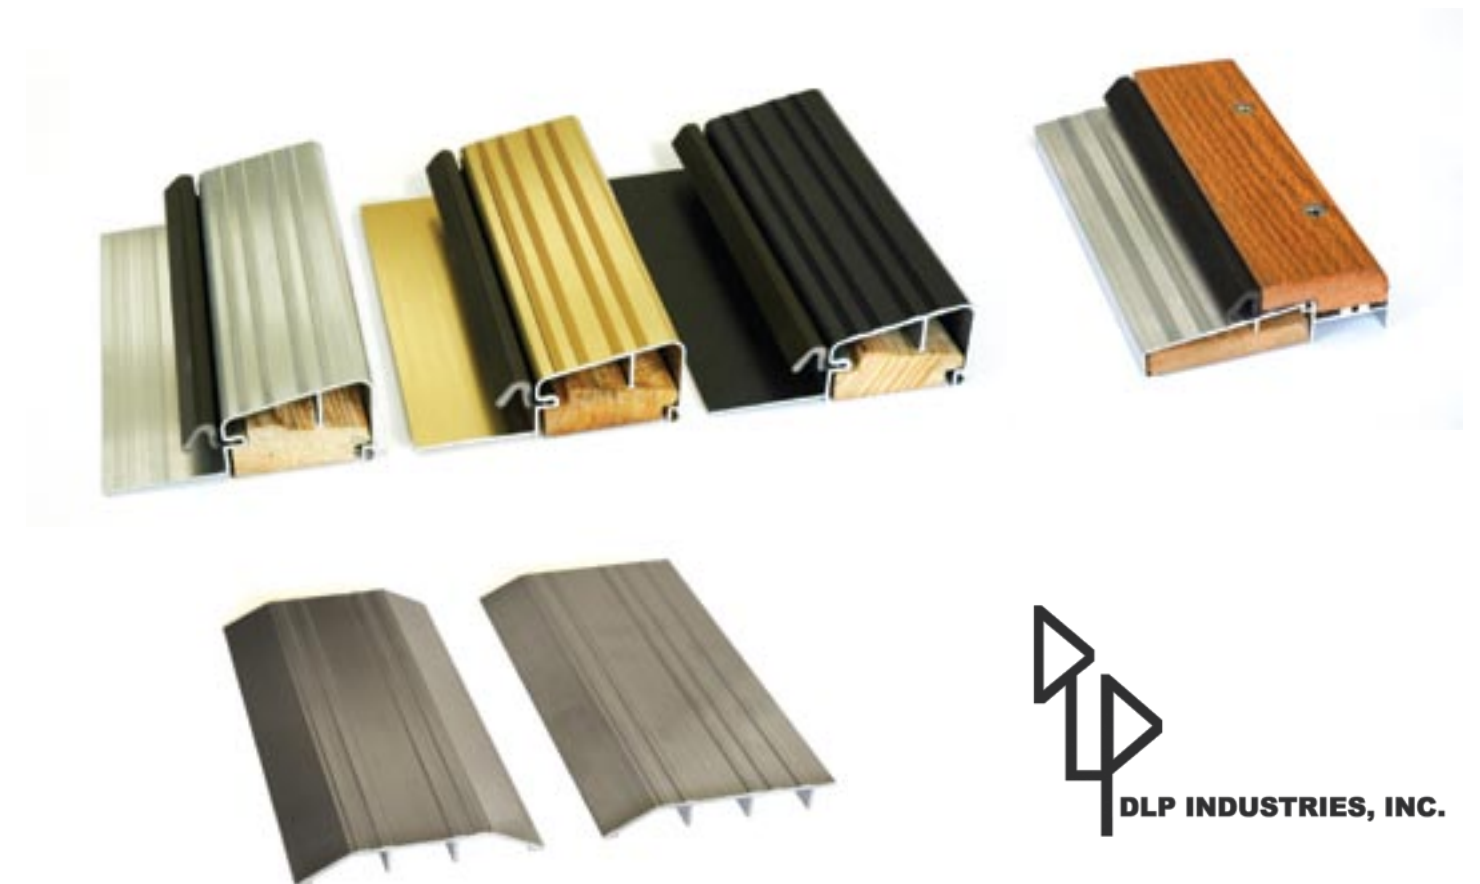

U.S. Patents Pending

DLP Industries Thresholds

For security and weather protection.

- Florida Building Code compliant
- Available in aluminum, bronze, bright gold, and oak
- Many style specifications available

DLP Industries Aluminum Astragal

Feel safe and secure with the DLP Aluminum Astragal between your doors. We believe that the home is a safe haven and every astragal that DLP manufactures is made to produce the highest design pressures possible for Florida Building Code and HVHZ Compliance. We do not need a separate "Hurricane Kit" to increase our design pressure as all of our astragals are assembled in the exact same fashion. We at DLP strive to maintain a quality, high-performance product while keeping the cost to a minimum. Our patented locking system and installation methods make for the easiest and most cost effective system in the industry.

Custom Preps

- All Astragals are cut to each customer's door specifications.
- For added strength and security we notch the ends of our astragal to mate with each customer's header and sill
- Multi-point lock preps are available

All aluminum astragal body encapsulates the inactive door, comes fully prepped to each customer's door specs and is installed in minutes.

Flush screw bosses

provided can be used without strike plates or have the ability to receive the strike plates supplied with your dead-bolt and door-knob lock sets.

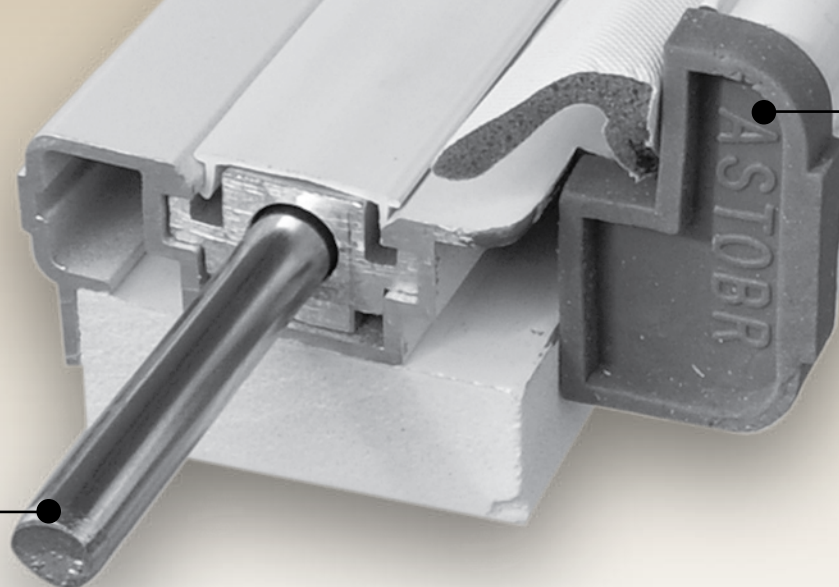

2" bolt throw and a 4" aluminum stiffener for added security and design pressures.

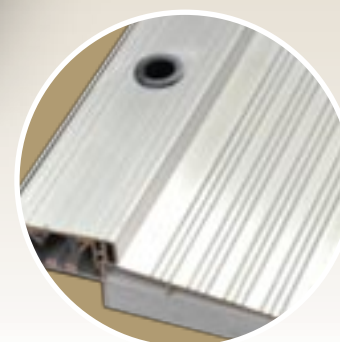

Header Strike Plate receives the slide bolt is supplied with every astragal to reinforce the header and eliminate blow out.

26 inch slide bolt allows for easy operation of the locking mechanisms without the need for a stool or ladder to reach the lock.

Specially formulated header and sill boots

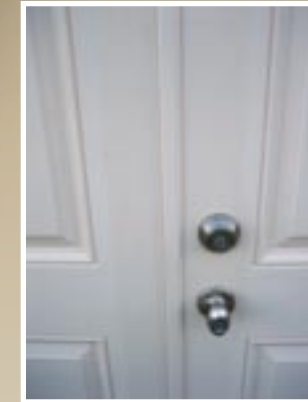

are fused to the ends of the astragal providing ultimate protection against water infiltration.

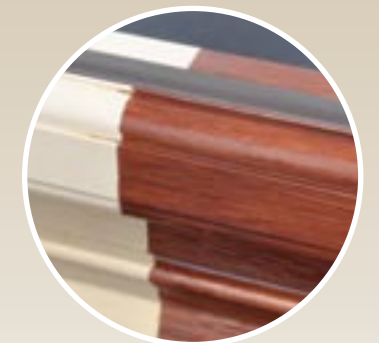

Sill bolt receiver provides protection against water infiltration as well as a finished appearance.

Toggle lock technology

provides the ultimate security providing simple and smooth operation and eliminates the ability of unlocking the astragal from the outside.

Security Strip is optional for outswing applications providing added security and eliminating the reveal between the doors for a clean finished appearance.

New Stainable Aluminum Finish

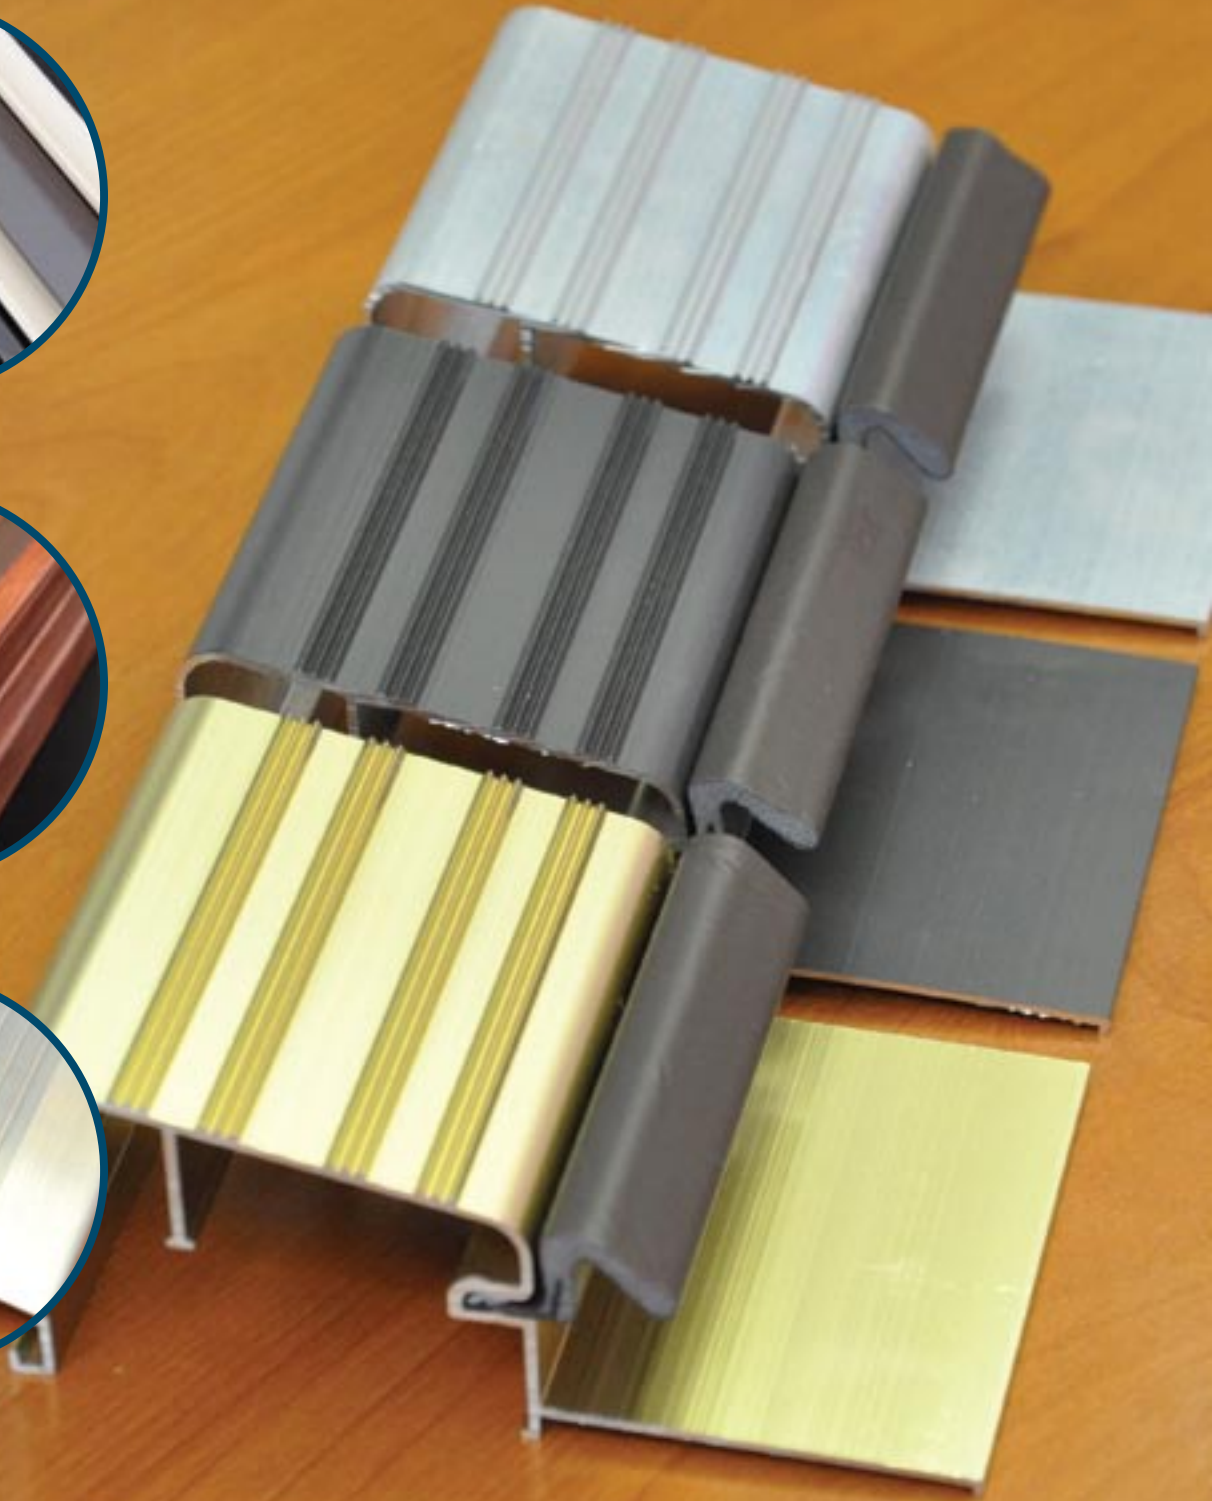

(Formulated by DLP)
